

CHAIN DRIVE UPGRADE

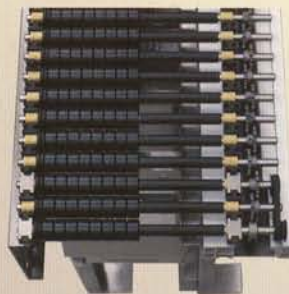

Shuttleworth has developed a system to convert an existing belt-driven, Slip-Torque® conveyor to chain-drive. Chain-drive accommodates higher speeds, heavy loads and hard to access areas of manufacturing lines. Customers can convert to a chain-driven design when it's time to rebuild their existing belt-drive, Slip-Torque®. Overall, chain-drive is a cost effective alternative to rebuilding/replacing existing belt-driven, Slip-Torque®. Reduced total cost of ownership is achieved by this conversion to chain-drive and the investment in your current product handling system.

SIMPLE BOLT - ON DESIGN

The kit components can be installed on most stainless steel and extruded aluminum frame designs. The kit includes a bolt-on side frame and drive mount.

A LOW COST OPTION TO REBUILDING YOUR EXISTING SHUTTLEWORTH CONVEYOR

ADVANTAGES >>>>

- Aluminum or Stainless Steel Frame
- Heavy Duty Drive Mechanism
- Less Horsepower Requirement
- Reduced Maintenance Costs
- Standard Bolt-On Design
- Self Lubricating
- Economical Alternative
- Eliminates Belt Maintenance

<<<< SERVICE CAPABILITIES

The system is designed for "Do It Yourself" installation. But if manpower and resources are an issue, Shuttleworth technicians are available. With over 50 years of combined service experience, the Shuttleworth Service team provides all of your Shuttleworth maintenance needs.

- Conveyor Rebuilds
- Conveyor Rework (Reconfiguration)
- Timing Belt Upgrades
- Component Upgrades
- Star Roller™ Conversions
- Chain Drive Conversions
- Pattern Former or Sortation Upgrades
- Roller Shaft Bearings
